

# Ice and Snow Take it Slow Q&A

**If moisture or frost clouds the inside of windows while driving, what should you do?**

*Stop in a safe area and remove it.*

**Should you over inflate or under inflate your tires during cold winter months?**

*Neither.*

*Tires should always be maintained at the level recommended by the manufacturer.*

**When heading down a snowy or icy hill, what should you do?**

*Shift into a lower gear before making your descent and maintain a slow steady speed.*

**What should be included in an emergency winter driving kit?**

*Small snow shovel, small bag of rock salt, sand or clay cat litter to generate traction, a windshield scraper and brush, flashlight and extra batteries, jumper cables, blankets, tool kit, brightly colored cloth to use as a flag, and a first aid kit.*

**Is it safe to drive with cruise control on when it is raining or snowing?**

*No.*

**If caught in a snow storm and you have to walk in the street, should you walk in the same direction as the traffic or facing oncoming traffic?**

*Always walk facing the oncoming traffic.*

**If your car is equipped with anti-lock brakes and you are braking on snow or ice, what should you do?**

*Apply firm and continuous pressure. If your car does not have anti-lock brakes, you can mimic that effect by pumping the brakes.*

**When approaching a snowy or icy hill, what should you do? Approach it at a slow speed and maintain that slow speed at a steady rate.**

**When sliding into a skid, it is best to do what?**

*Turn in the direction of the skid.*
