How to use a TIRE GAUGE

1. Determine the tire pressure for your vehicle.
2. Unscrew the valve stem cap on your tire.
3. Put your tire gauge on the stem, press down, & read the pressure.
4. If it's lower than your predetermined tire pressure, put air in your tire.
5. Repeat for all tires. Remember to put the cap back on!

Why should you check TIRE PRESSURE?

Colder temperature during winter months lead to a decrease in tire pressure.
Low tire pressure can lead to:

Reduced traction

Poor vehicle handling

Unpredictable steering and braking

Increased risk of tire blow-outs

Reduced fuel efficiency

Shorter tire lifespan
